

SCOPE OF SERVICES

1. Solution Overview:

SCHOOLPASS

The complete K-12 campus movement and safety solution.

SchoolPass is a K-12 platform helping schools manage attendance, campus movement, and campus wellness, in the cloud. Schools can consolidate and modernize the arrival, screening, and departure of students, staff, parents, and visitors in one place, while enabling schools to more quickly and accurately account for everyone on campus throughout the school day, especially during an emergency.

Secure Your Campus
Modernize Operations
Automate Attendance
Streamline Communications

SCHOOLPASS

One platform for consolidating student safety, physical attendance, dismissal, and parent engagement.

Campus Security

- Scan vehicles on campus
- Send instant alerts
- Control campus gates

Visitor Management

- Visitor sign-in/out
- Live sex offender check
- Student late/early tracking

Student Management

- Parent-managed changes
- Reduce administrative hours
- Real-time dismissal schedules

Bus Management

- Real-time bus manifests
- Control capacity by route/day
- Parent notifications

Carline Automation

- Build verified carline queues
- Automatically merge changes
- Driver validation

Activity Management

- Real-time activity rosters
- Parent enrollment & notification
- Electronic check-in/check-out

Campus Wellness

- Daily health & wellness screening
- Automate contactless curbside arrival & dismissal
- Simplified contact tracing

Emergency Attendance

- Manage emergencies and drills across your campus
- Integrated Mass Notification
- Take real-time attendance

Automated Attendance and Hall Passes

- Automate per period attendance
- Increase instruction time
- Know where everyone is on campus

Prevent school emergencies before they happen.

Secure Your Campus

Monitor campus vehicle traffic, screen visitors with modern contactless technology, and respond to emergencies faster with campus visibility and alerts.

Automate Operations

Consolidate attendance, late arrivals, early dismissals, bus changes, activity enrollment changes, playdates, and more into a single frictionless process.

Streamline Communication

Manage student schedule changes with 85% less admin hours by allowing parents to update attendance, arrival, and dismissal changes from the SchoolPass App.

Below is a list of all of the SchoolPass modules that are available for purchase. This does not mean that your school is purchasing all of these modules at this time. Please refer to the section "Modules Purchased & Pricing" to see which modules will be purchased.

2. Modules Available:

Base/Cloud Subscription

Parent Change Management. The Parent Change Management module is used by school staff and parents to manage and communicate student arrival and dismissal changes. A smartphone app (iOS and Android) for parents is available for download (at no charge). School staff, teachers, and parents are automatically notified when changes are made, and the changes are automatically merged into bus manifests, carline pickup schedules, and after-school activity rosters. Teachers and staff can take daily attendance, and teachers can automatically receive daily change reports for their classroom or grade.

Carline Automation (Mobile/GPS). The Carline Automation module allows a staff member to walk the carline and verify parents by searching by driver name, student name, or carpool/family numbers. Teachers and staff can check-off or verify that students departed with scheduled drivers. Daily student changes are automatically merged into dismissal instructions displayed in classrooms or dismissal locations. Optionally, schools can allow parents to check-in on their smartphones (using GPS) during dismissal instead of having a staff member walk the carline.

Bus Boarding Automation. The Bus Boarding module allows staff to print bus boarding manifests for more accurate bus boarding and faster departure. A staff member can also use the SchoolPass Staff App to check students onto or off of buses, and optionally notify parents when the bus departs the campus.

After School Activities. The After-school Activity module allows the school and parents to manage activities and enroll students or move students to activities on an ad-hoc basis. Enrollment rosters can be printed, or staff can use the SchoolPass Staff App to check students in and out of activities, with configurable notification to parents. Activities can be configured to require signature capture when checking students in/out.

Campus Dashboard. Know who is ON or OFF campus throughout the day (staff, students, and visitors). Takes all daily student changes, license plate scans, student late/early scans, bus boarding, activity check-in, carline dismissal movement into account (in real-time). The dashboard displays by campus and by grade

Campus Wellness. Self-reported wellness checks & tracking (staff and students). Automated reminders to parents & staff, compliance reports sent to designated admins/nurse, and Wellness check verification when Parents, staff, and high school students drive onto campus (license plate cameras required), or when MS/HS students arrive. Dashboard for designated admin/nurse to easily monitor daily compliance across divisions and campuses. Track "flagged" students and staff based on wellness check compliance, and allow only designated admins/nurse to reset flag.

Day Level Attendance*. Day level attendance by grade, homeroom or arrival advisory can be taken by teachers in a mobile responsive web page. Daily parent, admin and teacher changes are automatically merged into a single view. Front office admins has access to an attendance summary dashboard allowing them to see who has taken attendance, the attendance status for students and to send reminders to teachers with a click of a button. Attendance records can be pushed to your SIS*.

SIS Integration. SIS Data Integration Services (SDIS). Parent and student data can be pulled from the school's SIS. The data can be updated multiple times a day in SchoolPass. Single Sign-on (SSO) is also supported - allowing the parent to log into SchoolPass with their SIS credential. If the SIS supports the exchange of attendance data, SchoolPass can pull or push attendance data with the SIS.

**ALL SCHOOLPASS INTEGRATION FEATURES AVAILABLE WILL DEPEND ON YOUR SIS.*

Hand-Held RFID Subscription

Carline Automation (HH-RFID). The Handheld RFID Carline module allows a staff member to walk the carline and scan parents/drivers quickly and display their position in line in classrooms. Staff can optionally scan vehicles out once students are in vehicles. Daily student changes are automatically merged into dismissal instructions displayed in classrooms or dismissal locations. Parents have the option to use the SchoolPass Parent App to announce their arrival on campus (using GPS).

Campus Traffic Subscription

Carline Automation. The ALPR Carline Automation module is used to automatically identify (and verify) parents as they arrive on campus during dismissal using Automated License Plate Recognition (ALPR) cameras and displays ETA-based dismissal information automatically in classrooms or centralized dismissal locations where students are waiting. Daily student changes are taken into account when displaying dismissal information in classrooms. Staff also have the option to add parents/drivers on the Staff App. Parents can use the SchoolPass Parent App to announce their arrival on campus (using GPS).

Campus Traffic. Automatically identify vehicles arriving and leaving the campus 24x7 via ALPR cameras. Identify parents, high school student drivers, staff, visitors, and vendor vehicles. Alerts can be sent via text message and email when unwanted vehicles arrive or leave. Wellness Check verification for staff and teachers when they arrive on campus. Plate scans are used for real-time data in the Campus Traffic & Emergency Management modules. Pull trip data by date/time, lane, and driver time. Automatically open campus gates via ALPR (optional).

Touchless Student & Visitor Management

Visitor Management. Screen and manage visitors with instant sex offender check, badge printing and visitor notification. Digital IDs with QR code for students, parents, and staff for faster sign in/out. Barcodes and RFID reading are supported. Custom 'do-not-enter' flagged visitor list. Students can check in when arriving late or leaving the campus - and includes printing tardy/dismissal slips, and sending the records to your SIS. Students can sign in at the beginning of the day to be marked present (attendance). Students can also check in or out of scheduled activities or special classes. Pre-Register expected visitors for events for faster check in using a QR code. Bulk printing visitor badges for scheduled meetings and events. Staff check in and check out. Supports COVID-19 screening questions & wellness checks.

Emergency Attendance (includes School Alerts)

Emergency Attendance. Emergency attendance allows for emergency communication at the click of a button. On/off campus visibility for everyone including students, parents, visitors, faculty, and staff. Drill down into specific classes or grades to see students on/off campus and the last time they were seen. Drill further into student information to see parent/driver contact info, arrival and dismissal schedule and history of their movement for the past 7 days. All movement on campus is automatically accounted for from SchoolPass ALPR cameras, carline dismissal, bus boarding, activity check in/out, SIS attendance and Visitor Management scans. Take attendance of all people on campus to ensure everyone is accounted for.

School Alerts. Easily send non-emergency and emergency messages to your school community (school closures, 2-hour delays, or early dismissals, etc.). Send messages via email and text message. Message distribution by groups including staff, teachers, students, parents, internal or external emergency team. Send messages by site location, by grade and dismissal location.

Per-Period Attendance Automation and Hall Passes

Per-Period Automated Attendance and Hall Passes. A game-changing solution for K-12 schools that allows administrators and teachers to automate per-period attendance and to provide an easy, lightning-fast digital hall pass for students temporarily leaving the classroom. This solution gives teachers more time on instruction and less time on attendance-taking and administrative work.

With Per-Period Automated Attendance & Digital Hall Pass from SchoolPass:

- Students check in to each class period themselves using a QR code, barcode, or RFID tag.
- Teachers, front office staff, and administrators get real-time, school-wide insight into who is on campus and where they were last located.
- SchoolPass pulls in schedule and roster data from the student information system to ensure accuracy.

By replacing the manual attendance process with an automated approach, we are helping schools:

- Reclaim lost instructional time by removing the administrative burden of manual attendance from teachers.
- Lower attendance management admin costs for schools.
- Improve safety by providing a real time and accurate accounting of where students are at any given time.
- Improve emergency procedures with accurate student attendance/whereabouts information.
- Empower students with autonomy and helping them build competence in taking responsibility for getting to class on time.
- Remove teacher/student conflict over attendance disagreements. Students can appeal directly with the Attendance Manager.
- Provide Real Time insight into truancy issues.

Administrators and teachers have complete visibility into real time attendance records in SchoolPass. Attendance alerts could also be sent to administrators when students are out of compliance (absent, late, etc.). Attendance is pushed to your SIS*.

**ALL SCHOOLPASS INTEGRATION FEATURES AVAILABLE WILL DEPEND ON YOUR SIS.*

Pricing Assumptions and Terms

- Licensee may upgrade its subscription at any time
- Travel expenses are invoiced separately (if onsite support is requested by the Licensee)
- Pricing quoted in US Dollars
- Licensee will assign a point of contact or administrator for SchoolPass
- If purchased, Campus Traffic hardware installation requirements:
 - Licensee will install a pole at each camera location (if required)
 - Licensee will provide POE connectivity at each camera location
 - Licensee will assist with camera mounting
 - If required, wireless point-to-point units can be purchased separately
